Users module

The users module manages the profiles that live on the device. A profile is the owner of every other record in MyBudget: its categories, transactions and budgets all belong to it. There is no sign-in; the email only identifies the profile.

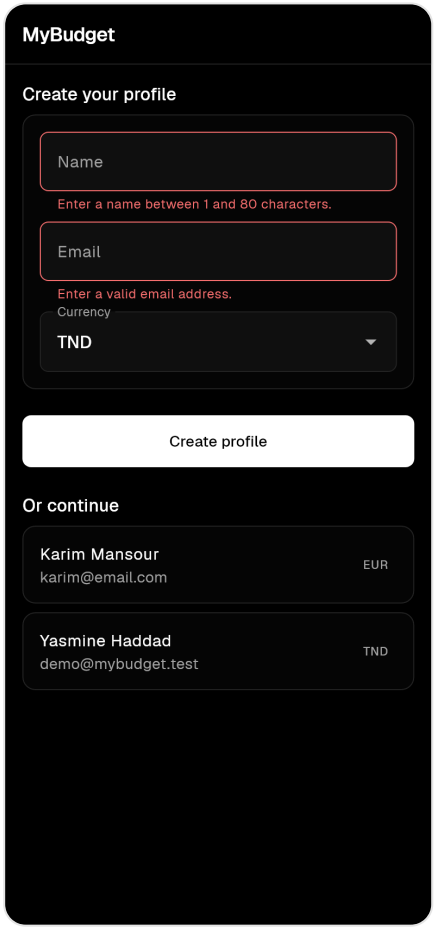

What it does

- Opens on profile creation when the device has no profile, and on profile choice when it has some.
- Creates a profile with a name, a unique email and a currency (TND, EUR, USD, GBP or MAD).
- Validates the form and explains each error under its field.
- Shows the active profile: name, email, currency and creation date.
- Edits the name, email and currency. A new currency changes the label on amounts, not stored values.
- Switches between profiles and deletes a profile together with all of its data.
- Asks the categories module to add the predefined categories to every new profile.

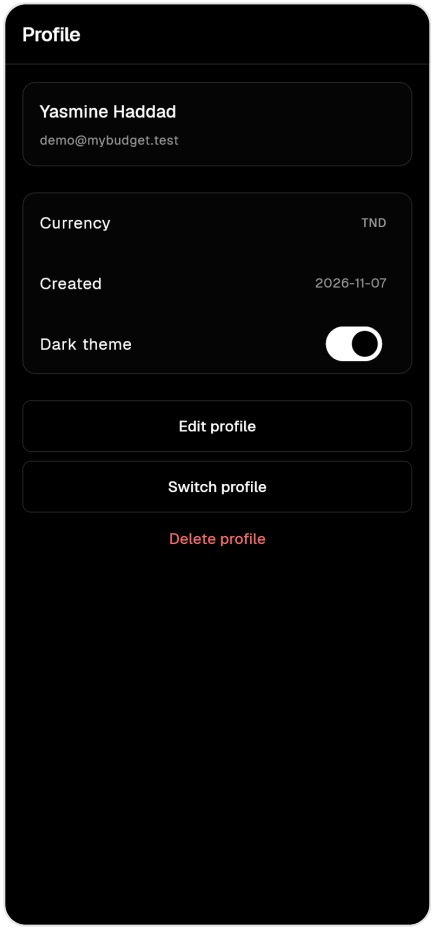

Screens

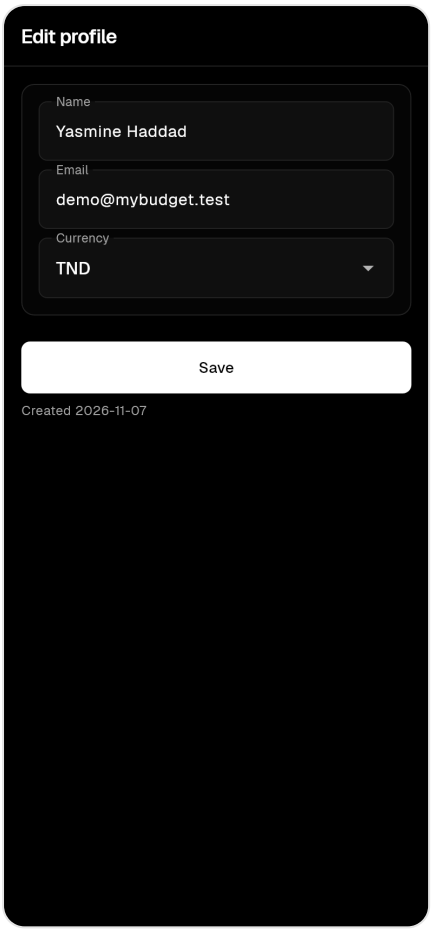

Profile gate
Create a profile, or continue with one already on the device.

Form validation
Empty name and email are refused with a message under each field.

Active profile
Profile details, the dark theme switch, and edit, switch and delete actions.

Edit profile
Name, email and currency can be changed.

Screens rendered from the app in its dark theme with the built-in demo data.
