Budgets module

The budgets module sets spending limits. A budget covers one expense category over a period, either a calendar month or custom dates. Spending is never stored on the budget: it is calculated from the expense transactions in that period, so the progress is always up to date.

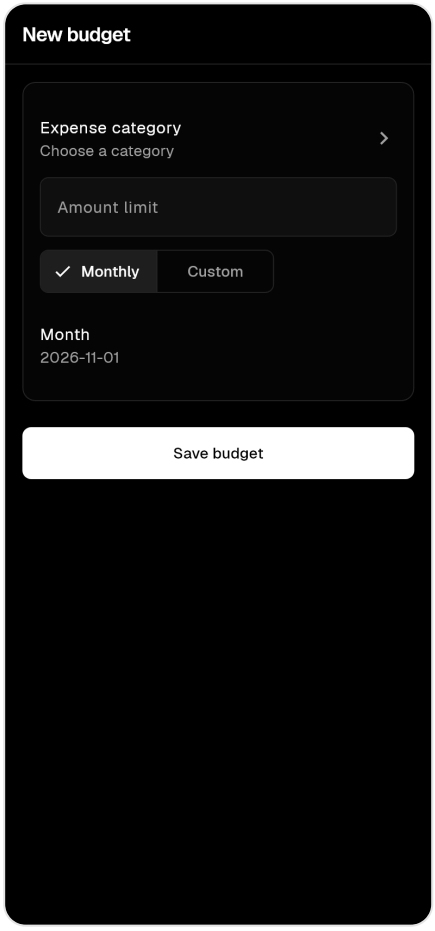

What it does

- Creates a budget for an expense category with a positive limit.
- Uses a monthly period (first to last day of a month) or custom start and end dates.
- Refuses income categories and overlapping budgets for the same category.
- Shows the amount spent, what remains and a progress bar for each budget.
- Marks each budget normal, warning (80% used and above) or exceeded (over 100%).
- Edits or deletes a budget. Deleting it keeps the transactions.

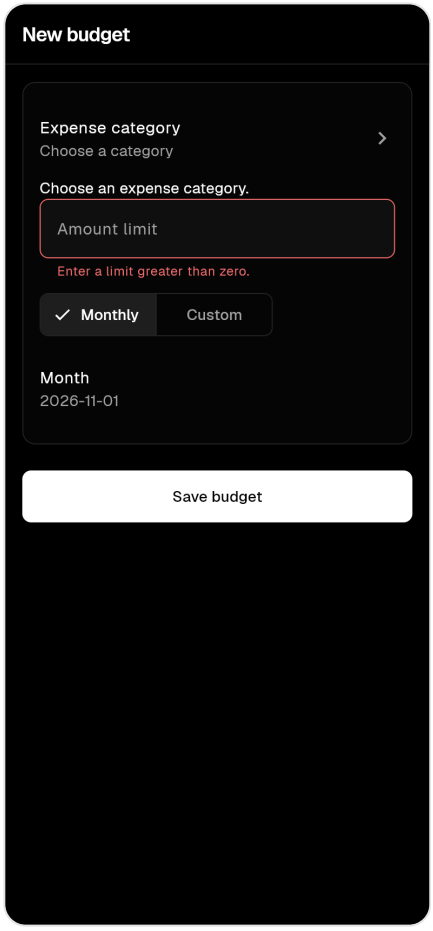

Screens

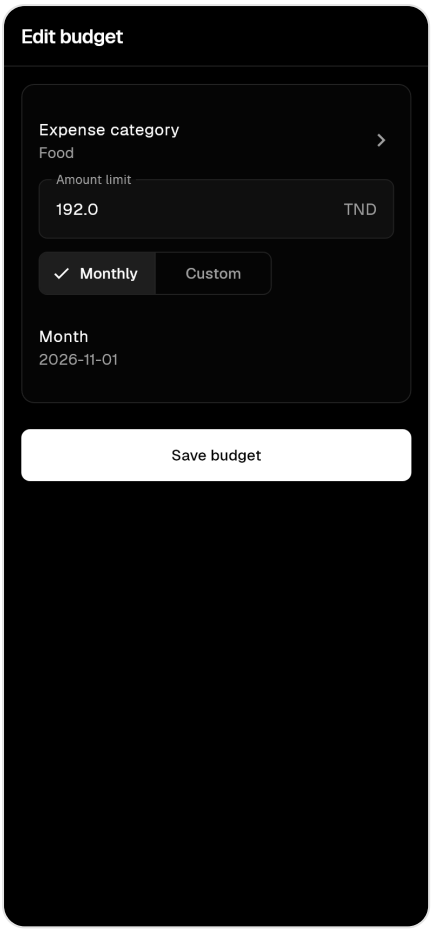

Budgets
This month's budgets in all three states: normal, warning and exceeded.

New budget
Expense category, limit and a monthly or custom period.

Form validation
A category and a positive limit are required.

Edit budget
The Food budget opened for editing.
