Budgets

The budgets module sets spending limits. A budget covers one expense category over a period, either a calendar month or custom dates. Spending is never stored on the budget: it is calculated from the expense transactions in that period, so progress is always up to date. Each budget also warns about holidays and Ramadan in its period, when spending usually changes.

What it does

- Creates a budget for an expense category with a positive limit.
- Uses a monthly period (first to last day of a month) or custom start and end dates.
- Refuses income categories and overlapping budgets for the same category.
- Shows the amount spent, what remains and a progress bar for each budget.
- Marks each budget normal, warning (80% used and above) or exceeded (over 100%).
- Lists Tunisian public holidays, Ramadan and the Islamic holidays that fall inside the budget period.
- Edits or deletes a budget. Deleting a budget keeps its transactions.

Free APIs used

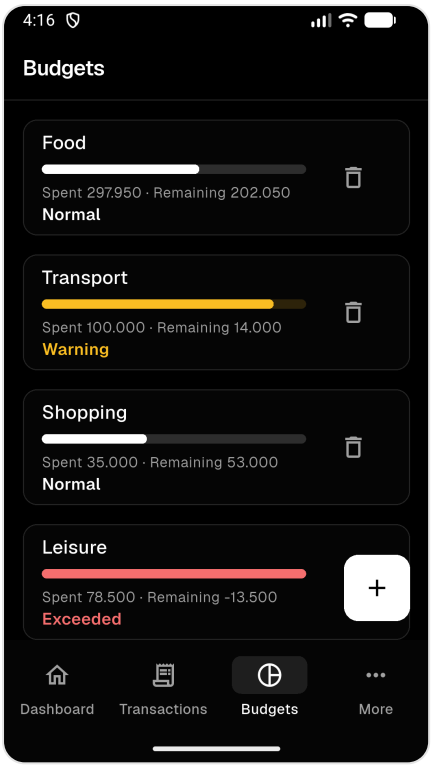

Nager.Date date.nager.at

Tunisian public holidays such as Independence Day and Republic Day.

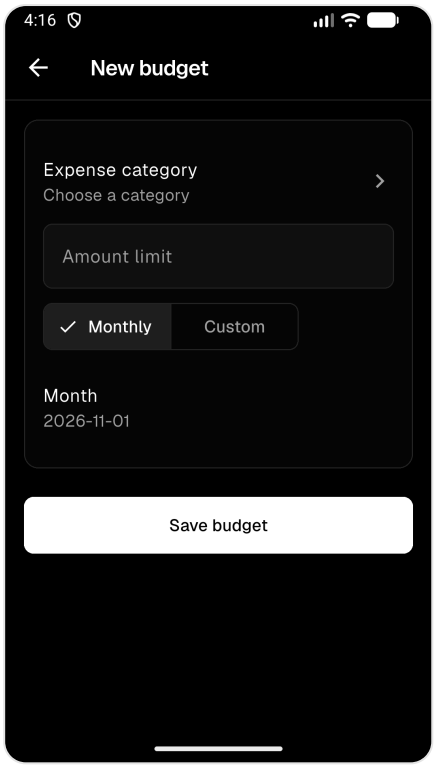

AlAdhan api.aladhan.com

The Hijri calendar, used to find Ramadan, Eid al-Fitr, Eid al-Adha, the Islamic New Year and Mawlid. Both calendar answers are cached for a month.

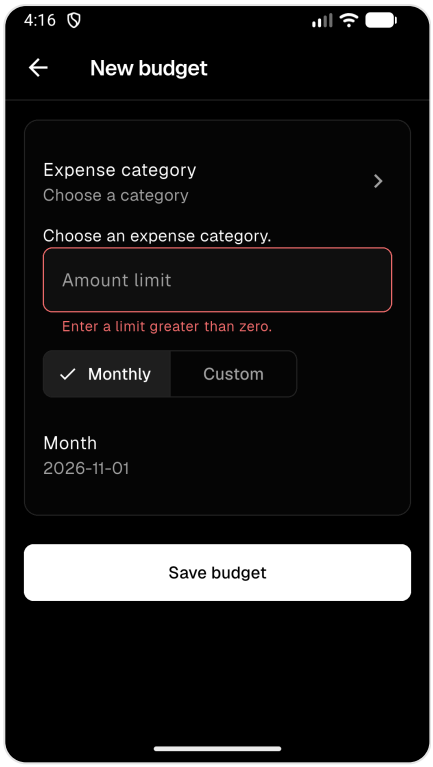

Screens

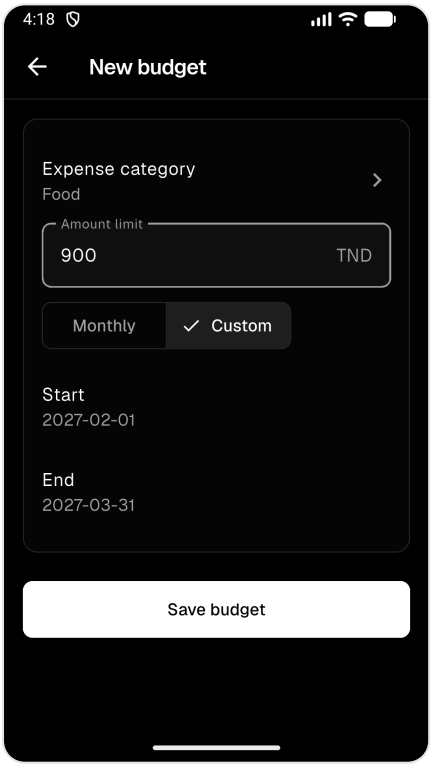

Budgets
This month's budgets in all three states: normal, warning and exceeded.

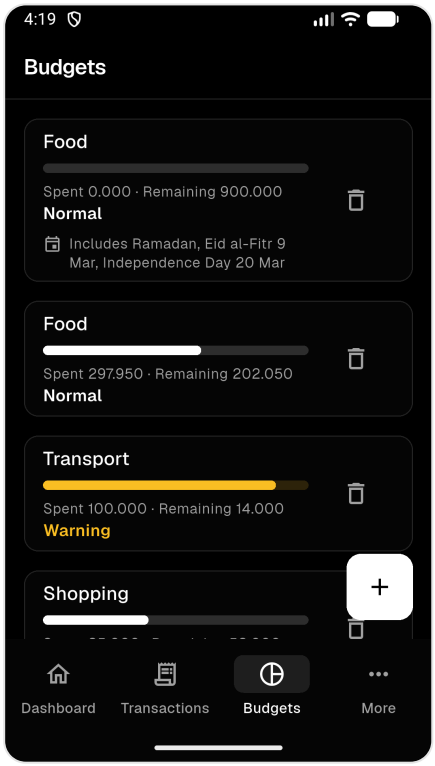

New budget
Expense category, limit and a monthly or custom period.

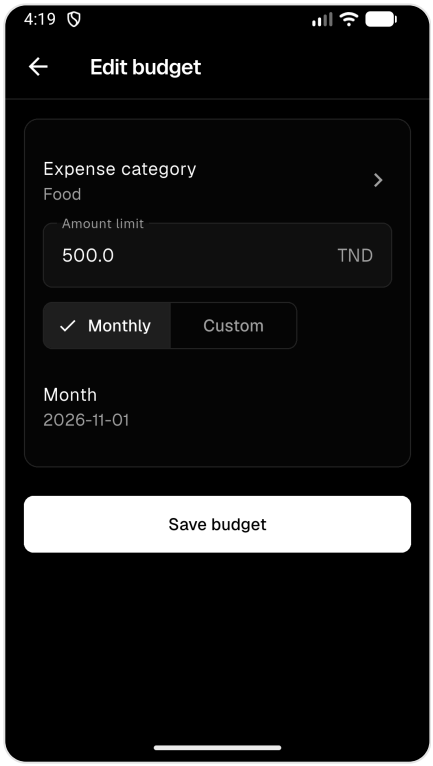

Form validation
A category and a positive limit are required.

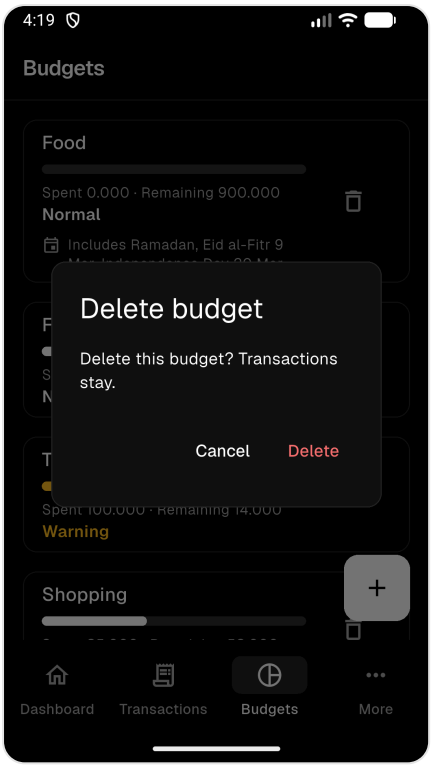

Custom period
A 900 TND Food budget from 1 February to 31 March 2027.

Holidays in the period
The new budget lists Ramadan, Eid al-Fitr and Independence Day.

Edit budget
This month's Food budget opened for editing.

Delete budget
Deleting asks first and keeps the transactions.

Screens captured on an Android emulator from the app in its dark theme (one in light), using the built-in demo data, November 2026.
